

CLR

Photopolymer Plates

Clear, Yellowing-Resistant Liquid Photopolymer for Stamping Applications

MacDermid's CLR photopolymer combines superior UV stability and yellowing resistance with unparalleled flexibility and toughness.

Our CLR photopolymer is a 40 Durometer (Shore A) resin used to manufacture 0.067-0.140" liquid photopolymer printing plates for the craft, hobby and scrapbook market.

For high quality ink transfer resulting in superior print reproduction, count on the company that says "Yes We Can." MacDermid.

Key Features

- Outstanding resistance to yellowing and UV stability
- Remarkable clarity. Water-white from liquid through to finished plate
- High toughness and flexibility, extremely tear resistant

Technical Specifications

Hardness (Shore A)	40
Plate Thickness (in)	0.067-0.140
Background Thickness (in)	0.037-0.080
Relief Height (in)	0.030-0.060
Washout Chemistry.....	W6410-L
